

DERMEDICS™
HYAL GEL

**Contains very low molecular weight
50-kDa Hyaluronic Acid!**

[molecular weight of 50-kDa HA is analogical to the size of human's skin pore and provides the best penetration abilities]

DERMEDICS™ HYAL is an innovative contact gel designed for aesthetic medicine purposes. It ensures the proper connection between electrodes, probes and the skin. Gel visibly rejuvenates the skin for a younger and healthier appearance.

Recommended for skin of all ages.

Overview

- Contains very low molecular weight hyaluronic acid (VLMW HA) in size 50kDa which is similar to a human's skin pore
- Deeply hydrates the skin
- Keeps ions' homeostatic balance
- Increases proteins' expression of intercellular bridges
- Stimulates endogenous synthesis of hyaluronic acid of fibroblasts in epidermis
- Plumps up small wrinkles
- Microbiologically pure
- With proper viscosity
- Transparent colour
- Hypoallergenic
- Water soluble
- Dermatologically tested

Active Ingredients

The newest generation of very low molecular weight Hyaluronic Acid (LMW HA 50 kDa) has increased ability to penetrate into the deeper layers of the skin. It is non-pathogenic and hypoallergenic. It keeps ions in a homeostatic balance, increases proteins expression of intercellular bridges, stimulates endogenous synthesis of hyaluronic acid of fibroblasts into the epidermis and plumps up fine lines increasing skin density.

Directions for use

- This product was developed mainly for procedures with **needle-free mesotherapy**:
- Ultrasounds (Sonophoresis)
 - Electroporation (Electrophoresis)
 - Iontophoresis

This product can be used also with:

- Radio Frequency (RF)
- Cavitation (Ultrasonic Liposuction)
- Laser Lipolysis (optional just to provide extra anti-aging benefits for the skin)

Packaging:

**Hypoallergenic | Paraben Free
Fragrance Free | Colourants Free
Allergen Free**
